

HP and Datric

Agile Data Suite

Accelerate your data projects, define data for your entire enterprise, create a single version of the truth

Enterprise metadata management

Businesses collect countless varieties of information but it is of little value unless it is processed into a format that can be readily discussed, understood and applied to effective decision-making. The challenge of deploying effective solutions to deal with this problem can be overwhelming.

Data integration and management for HP Neoview platform

Agile Data Suite (ADS) is a data integration and management application that enables enterprise-standardized data usage. It ensures that definitions, mapping, modeling and data traceability occur across business and technical environments. This multi-perspective integration model aligns the disconnected architectures of business, technical and data management. ADS solves severe data integration problems with an understandable interface, pre-defined terms, definitions, business models and a cross-system mapping tool on a centralized object repository. ADS provides effective project planning, significantly faster implementations, reduced data replication and greater adaptability to change.

Solution benefits

- Reduces time to achieve data integration
- Reduces system maintenance and change costs
- Establishes a common cross-team language
- Provides greater flexibility in implementing business and technical requirements
- Saves time and money through reuse

Working together with HP

Business Intelligence solutions enable you to tap into the vast pools of information residing across your enterprise. The HP Neoview enterprise data warehousing platform represents a new approach to business intelligence. Unlike legacy enterprise data warehouses, the Neoview platform is designed to meet the needs of a 24x7 operational BI environment, where massive amounts of information are analyzed in seconds. Working with HP, we offer scalable, available and cost-effective BI solutions that deliver flexibility and performance to provide the intelligence you need, when you need it, and increase the value of your information assets.

Agile Data Suite for HP Neoview platform

ADS enables many viewpoints to be represented through an object-oriented approach to data management. Business and technical views are linked through an abstraction layer to form a common set of requirements. This common understanding allows different types of users (IT, business, etc.) to examine these features simultaneously from their unique perspectives. With these views, data can be easily understood across projects, functions and systems. In ADS, requirements are mapped to the abstraction layer. This insulates other requirements from changes. It also results in time and expense reductions by orders of magnitude because a single requirement change is reflected in multiple views without additional effort. In addition to the revolutionary data management architecture, ADS comes pre-loaded with a robust business model and thousands of business terms with definitions. Optional components include pre-defined mappings for most popular enterprise resource planning (ERP) systems including SAP.

HP servers supported

To support today's always-on marketplace, our solutions are supported on HP Integrity servers with 64-bit Intel® Itanium® 2 processors inside. When it comes to 64-bit computing, HP Integrity servers set the standard—having demonstrated world-leading performance and price/performance across the industry's most demanding and diverse workloads. From one-way, entry-level systems to 64-way HP Integrity Superdome systems, this family of servers delivers always-on technology—always virtualized, always scalable and always available—to support your most challenging application environments.

HP software supported

Our solutions leverage the HP Neoview platform, which changes the landscape of data warehousing and delivers a unique combination of full enterprise-class performance, scale and functionality, together with simple deployment and management, at an affordable cost. When operational BI and real-time enterprise data warehousing are used together, as enabled by HP Neoview, the result can improve bottom line results by millions.

Service and support

Datric is a premier provider of data integration and collaboration solutions. Datric consultants have experience both architecting and implementing data integration systems for many Fortune 100 companies. We combine a simple, time-honored approach to business with leading-edge technology to help you achieve your goals.

Building on the value of strong relationships

By working collaboratively with HP, we can leverage the necessary resources, experience and knowledge to deliver tailor-made solutions that drive better business value. For more than 50 years, HP has thrived on innovation, holding a proven track record of success in virtually every market, customer segment and region worldwide. Together, we use innovative technology and services to design solutions that meet today's business challenges, while helping you prepare for tomorrow's.

HP and Datric combine scalable hardware and ground-breaking implementation software to make your enterprise data warehouse project a success. Agile Data Suite drastically reduces implementation time and cost on the high-performance HP Neoview platform. With ADS and the HP Neoview platform, a robust yet cost-effective enterprise data warehouse (EDW) can be ready in months, not years.

Working together to drive success

By combining standards-based and modular technologies with our leading-edge applications and comprehensive services portfolio, you gain a powerful, flexible, solution that meets your business needs today and dynamically adapts as those needs change. We provide an agile foundation for building a highly responsive enterprise that drives better business outcomes and promotes your long term success.

Technology for better business outcomes
