

# The Revolution in Enterprise Metadata Management

Agile Data Suite is **enterprise data management software** that integrates a proven implementation methodology, predefined content and the control you need for **rapid and accurate business requirements definition and technical mapping** between multiple physical and logical systems.

## Agile Data Suite Benefits

<p>Reduce costs by 50 – 60%. Enterprise data warehouse implementations in 3 – 6 months</p>	<p>Agile Data Suite (ADS) is a revolutionary approach for enterprise data management. Both business and technical specifications, definitions, metadata, data mapping and cross-project data relationships are seamlessly combined to facilitate data use and understanding. ADS dramatically reduces project costs and time.</p>	<p><b>Advantages</b></p> <ul style="list-style-type: none"> <li>✓ Functional and technical specifications, metadata management and data governance in one integrated package</li> <li>✓ Manage life-cycle data across multiple projects across time</li> <li>✓ Accelerate projects with predefined content</li> <li>✓ Integrate functional and technical specifications</li> <li>✓ Reuse instead of recreate with a system-neutral approach</li> <li>✓ Enable complete IT audit compliance</li> <li>✓ View data lineage and where-used</li> <li>✓ Automatically track data changes: name, definition, mapping and more</li> <li>✓ Add systems, interfaces and mapping without rework</li> </ul> <p><b>Solutions</b></p> <ul style="list-style-type: none"> <li>✓ US Tax Compliance</li> <li>✓ System Decommissioning</li> <li>✓ Point-of-Sale</li> <li>✓ Demand Signal Repository</li> </ul>
<p>Plan strategically, implement tactically. Single data set provides consistency and accuracy</p>	<p>Business is constantly changing and change drives projects. The ability to respond to change is the differentiator between success and failure. It is not a matter of doing more work – it is a matter of doing the right work a minimum number of times! ADS gives you the ability to manage, qualify and quantify change requirements.</p>	
<p>Accelerate projects with predefined content: 4,000 business terms 300 documents Business areas Business processes</p>	<p>Agile Data Suite starts with a predefined business model built upon common understandable business objects: documents, business terms and term definitions. The results are immediate communication improvements between business and technical teams.</p>	
<p>Ideal for: Consolidations Migrations Conversions Decommissioning Data Management</p>	<p>The approach is simple: provide a common understanding of data for use by everyone – business and technical, detailed and high-level. In ADS data, or more specifically metadata, are reusable objects. Metadata definitions and relationships are not stored in different systems for different purposes, but commonly for use by multiple teams and perspectives.</p>	
<p><b>Agile Data Suite Architecture</b></p>		
<p>ADS On-Demand™</p>	<p>No hardware, software or long-term contract - ADS is available as a service with ADS On-Demand. Starting at \$200/month, ADS On-Demand is the ideal solution for most companies.</p>	
<p>ADS EMA™</p>	<p>ADS EMA™ is a unique enterprise metadata management appliance. Fully configured as a 'plug &amp; play' solution, ADS EMA™ is the ideal solution for those companies that want to have complete control with a minimum amount of effort.</p>	
<p>ADS EMA™ for HP Neoview</p>	<p>ADS EMA™ for HP Neoview combines the advantages of ADS EMA™ with Neoview-certified connectors. Leverage the power of scalable enterprise data warehousing and rapid implementations.</p>	
<p><b>Agile Data Suite Options</b></p>		
<p>Agile Data Suite for SAP</p>	<p>With over 13,000 pre-defined table-field mappings, SAP projects have never been faster or easier. Conversions, upgrades, re-implementations and data warehouse projects are fast and easy.</p>	
<p>AgileModel™</p>	<p>The benefits of modeling without the work. AgileModel™ replaces the complex job of developing data models with a model generator. Multiple model types can be created from the ADS requirements and mappings with no additional effort.</p>	

## Agile Data Suite Features

### Content

- Enterprise Business Model
- Enterprise Logical Model
- Business documents, terms and definitions
- Alias and derived term capability
- Processes and business areas
- Document and data relationships
- Reporting star schemas

### Graphical Mapping

- Drag and drop graphical interfaces
- System-document and system-system mapping
- Source-target mapping with ETL rules and comments
- Multi-step ETL specifications

### Data Management and Control

- Object search and where-used
- Audit and change control logs
- Functional security and authorization
- Document versioning
- Functional validations

### Project Management

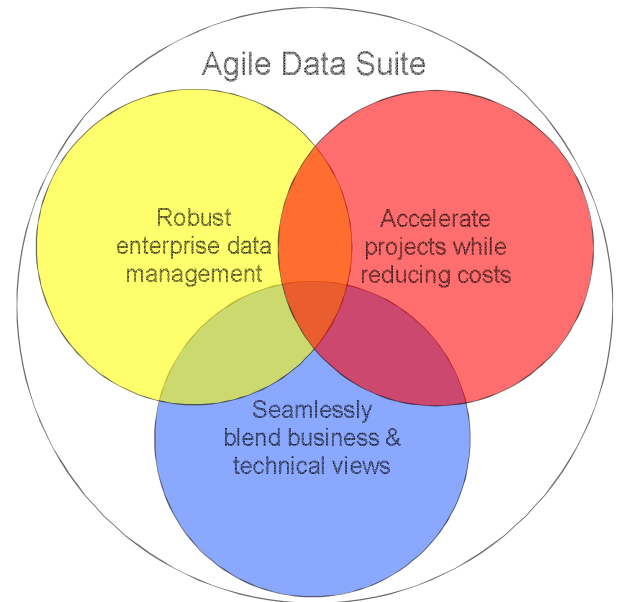

- Cross-project & cross-time management
- Integrated approval process
- Work assignments and work flow
- Issue logs
- Project management dashboard
- Project management status and progress analytics

### Enterprise Metadata Repository

- Systems Inventory
- Models, Reports, Analytics
- On-line creation
- System import via MS Excel, XML template

### Reports

- Mapping reports and analytics
- Enterprise Glossary
- Configurable report framework

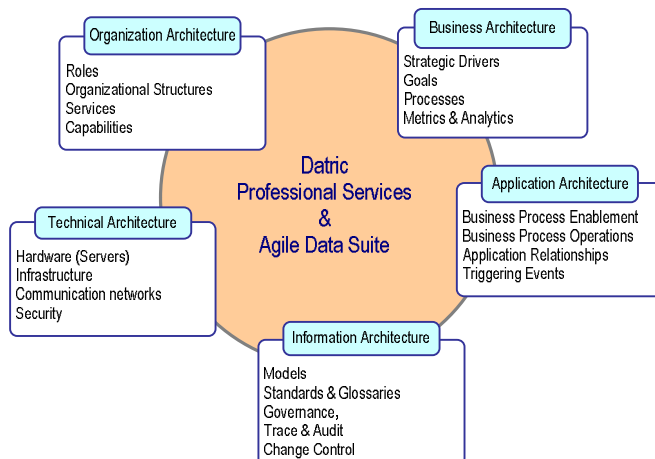

Datric is a premier provider of data integration and data warehousing solutions. We advise Fortune 100 companies in enterprise system design and architecture, data warehousing, and system consolidation. Additional areas of expertise include enterprise resource planning, supply chain systems, data management and decision support system integration.

Datric provides solutions. Our services and software support projects ranging from small to enterprise-class. We combine a simple, time-honored approach to business with leading-edge technology to help you achieve your goals. Our integrated solutions give our clients confidence that their business needs will be met with minimum hassles and maximum value.

Datric consultants have years of industry, business and technical experience gained in complex, global environments. Our teams plan for the needs of tomorrow, not just for the technical problem of the day. Our consultants will work with you to address complete data management solutions including design, implementation, operation and training.
